QUICK GUIDE

ECHO-OUT

What it is, how to spot it and what to do with it.

WHAT IT IS

An echo-out repeats the last beat of a track with a delay while you pull the track's fader down. The echoes fade away and the next track takes over.

WHAT YOU'LL NOTICE

Smooth and dramatic. The old track melts away instead of stopping.

01

SET A SYNCED DELAY

Use a beat-synced echo, such as one beat or half a beat.

02

ECHO THE LAST BEAT

Switch the echo on at the last beat you want repeated.

03

FADER DOWN AT ONCE

Pull the outgoing channel down so only the tail rings out.

DO THIS TONIGHT

Echo-out three tracks in a row, each into a clean start on the next phrase.

- [ ] Choose a track with no outro.
- [ ] Echo on at the last beat. Fader down right away.
- [ ] Bring the new track in under the fading tail.

PRACTICE & CHECK

ECHO-OUT: YOUR TURN

WHERE YOU'LL MEET IT AS A DJ

- Leaving a track that has no outro.
- Moving between two records that have little in common.
- Escaping a blend that isn't working.

QUICK CHECK

1. When do you switch the echo on?

2. What happens to the fader?

3. What should the delay be synced to?

Answer key: 1) On the last beat you want repeated. 2) It goes down straight away. 3) The tempo, such as one beat or half a beat.

REMEMBER

Echo on. Fader down. Next track in.
