QUICK GUIDE

USB EXPORT CHECKLIST

What it is, how to spot it and what to do with it.

WHAT IT IS

Playing from a USB stick means the club player reads files your DJ software exported. If the format, folders or analysis are wrong, tracks or waveforms may not appear.

WHAT YOU'LL NOTICE

Prepared. You walk into the booth knowing the stick works.

BEFORE YOU LEAVE HOME

- ✓ **FAT32 OR EXFAT**
  Format the stick right.
- ✓ **FOLDERS INTACT**
  Don't move or rename them.
- ✓ **ANALYZED + CUED**
  Waveforms and cues load.
- ✓ **SPARE STICK**
  Plus a fallback crate.

01

FORMAT THE STICK RIGHT

FAT32 or exFAT is the usual choice. Check your player's manual.

02

KEEP THE STRUCTURE INTACT

Don't rename or move the export folders.

03

ANALYZE, CUE AND TEST

Waveforms and cues should load on a second player.

DO THIS TONIGHT

Export a 45-minute playlist and load it on a second player or device.

- ☐ Export your playlist from your DJ software.
- ☐ Load it on another player and check tracks, cues and waveforms.
- ☐ Pack a spare stick with a fallback crate.

PRACTICE & CHECK

USB EXPORT CHECKLIST: YOUR TURN

WHERE YOU'LL MEET IT AS A DJ

- Preparing a set at home for a club with standard players.
- Carrying a spare stick and a fallback crate.
- Testing the export on a second player before the gig.

QUICK CHECK

1. Which formats are the usual choice?

2. What should you not do to export folders?

3. When do you test the stick?

Answer key: 1) FAT32 or exFAT. Check your player's manual. 2) Rename or move them. 3) Before you leave home.

REMEMBER

If you haven't tested it, it isn't ready.

YOUR NOTES
