QUICK GUIDE

TRIANGLE WAVE

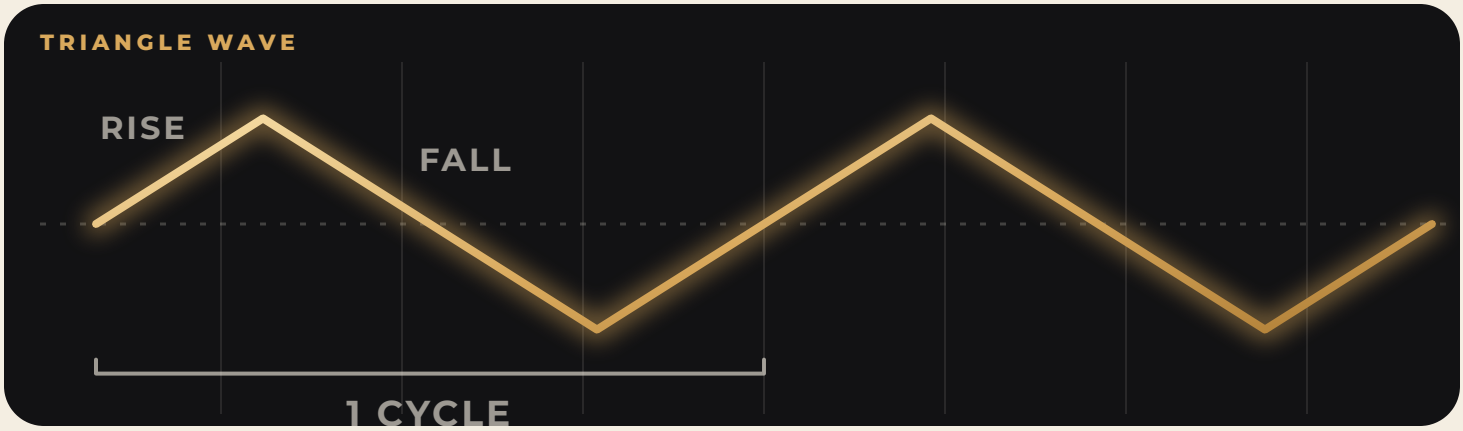

What it is, how to spot it and what to do with it.

WHAT IT IS

A triangle wave rises and falls in straight lines. It has odd harmonics like a square wave, but they fade out much faster, so it sounds softer.

HOW IT SOUNDS

Smooth, hollow and gentle. Brighter than a sine, softer than a square.

01

STRAIGHT UP, STRAIGHT DOWN

A zigzag with sharp points but no flat tops.

02

WEAK OVERTONES

The harmonics drop off quickly, so it sounds soft.

03

BETWEEN SINE AND SQUARE

Brighter than a sine. Gentler than a square.

DO THIS TONIGHT

Reach for it when you want body without bite.

- [ ] Play a triangle and a square wave at the same volume.
- [ ] Notice how much softer the triangle feels.
- [ ] Pick the softer shape for pads and background layers.
